1. **Write a program to ascending sort the elements from the following list. (Create a function to solve it)**

   List = [1, 5, 2, 9, 3, 22, 13]

Python Code is: -

```
def ascending_sort(data):
    sorted_list = sorted(data)
    return sorted_list

# The function from the given Data List
list = [1, 5, 2, 9, 3, 22, 13]
sorted_list = ascending_sort(list)
print("Sorted List is:-", sorted_list)
```
